

RESOPREN® ist ein nicht-resorbierbares, monofiles Nahtmaterial aus Polyvinylidendiflourid (PVDF). Ähnlich wie Polypropylen handelt es sich um ein hydrophobes und absolut inertes Produkt, welches zudem noch über eine Längselastizität verfügt, die besonders beim Knoten vorteilhaft ist. Zudem wirkt sich diese Eigenschaft positiv beim Einsatz als Hautnaht aus und so wird eine Nadelauswahl für vielfältige Indikationen vorgehalten.

- nicht-resorbierbarer PVDF-Faden
- chemisch inert
- hydrophob
- keinerlei Gewebereaktion

RESOPREN®

RESOPREN® is a non-absorbable monofilament suture based on Polyviny-lidendiflourid (PVDF). Similar to Polypropylen the product is hydrophobic, absolutely inert and provides elasticity to support safe knotting. All product properties listed before have a positive effect during skin closure and so many needles for different indications are available.

- non-absorbable PVDF suture
- absolutely inert
- hydrophobic
- non-irritating
